

Twenty-eighth day of class - 12/4

Fun fact: The elliptic curve $y^2 = x^3 - 4x$ is the only elliptic curve over $\mathbb{Q}$ (up to isomorphism) whose discriminant is a 12th power.

Course evaluations:

Please take some time now to do course evaluations. There are some spots on the form to answer instructor supplied questions. Here are the questions that I would like you to answer:

1. What went best for your learning of the material this semester?
2. What didn't go well with your learning this semester? How could that be changed?
3. If you could change just one aspect of the course, what would you change? How would you change it?
4. Do you have any additional comments?
